## PENINSULA HOUSE

Located on the sand dunes of an ocean beach and nestled among native tea trees, nature informed Ryan Moody's design on Victoria's Mornington Peninsula in Australia. Moody has created an architectural masterpiece perfectly suited to its seaside location, clad with natural materials including stone, timber and glass.

The stone elements are particularly fitting, particularly using Rhodes Architectural Stone's newly quarried

Amande Limestone for the internal and external wall cladding.

Aesthetically, Amande Limestone seamlessly blends with the cool beachside tones, and is also beautifully hand finished with an intricate, fine adze texture, making the new home look as though it existed long before the house was built.

Indeed, the intricate hand finished point stalk details in the stonework, including quoins, have really set this project apart.
